

Innovative concrete panel fencing is the talk of the town

About the project

Pete Thomas originally came to Concrete Panel Systems to build pens for the Barbers Auctioneers at Market Drayton with our concrete panels. After a few successful builds Pete had another idea for the CE marked panels, and that was to use them for fencing around the markets.

Pete noticed the deterioration of many of the wooden fences on site and decided to use concrete panels instead for his fences, with the hopes that they would provide a much sturdier and long lasting solution.

“You would usually use kickboard for fencing, but I got on to Concrete Panel Systems and they did me some 500mm panels, 11ft 6 long. Kickboard is very flimsy and thin – whereas CPS concrete panels are 90mm thick so they’re very powerful and you can even get 140mm if you want something stronger.”

“A lot of the wooden fences here at the market have started to rot after only being up for about 4 years.”

Quality control

Pete wanted to make sure that the panels were installed carefully and securely, as he knew a haphazard approach could lead to damaging the materials. Concrete Panel Systems were with him all the way to make sure he got the best out of his product.

CPS concrete panels are designed with the eyes at the top, which makes them even easier to lift and means no holes are visible from the sides.

“Someone asked me if I pulled the eyes out of the panels when I was lifting them, but that only happens if you lift them wrong. I lifted mine sensibly and had absolutely no problem whatsoever.”

He was sure to check for any defects with the concrete panels, but couldn’t have been more pleased with the results.

“Everyone who’s come here has said ‘Wow, what a brilliant idea – the fence will never rot!’ I have recommended Concrete Panel Systems to a lot of farmers around the market.”

“They’re brilliant quality. You haven’t got concrete down the threads which can be a big problem. I’ve ordered such a large amount of panels from CPS and we haven’t even had an issue with one of them, which is fantastic. I can’t complain.”

Mark of approval

As part of their successful scrap metal and car dismantling operation RR Davies required a concrete fence around the compound and a concrete base for non-ferrous metals.

The driving factors for choosing concrete over fencing or other walling solutions was its ability to screen the contents of the compound that include ferrous and non-ferrous metals like aluminium, brass, copper, bronze, stainless steel and from the outside.

What impressed John the most about CPS was their attention to detail and the fact that they delivered when they said they would deliver.

Pre-stressed concrete walling is a cost effective and efficient way of constructing temporary or permanent buildings and walls for a range of industries that include agricultural, equestrian and industrial.

Benefits

Nationwide Delivery

Established UK supplier offering nationwide delivery. Collections also accepted.

British Manufacturer

We are proud to support British Farmers and manufacturer all products in the UK.

Quality Assured Concrete

All of our concrete panels are CE Marked and offer a superior finish and durability.
